SIMATIC ET 200M Upgrade

Immanent obsolescence - time for new opportunities

Simatic ET 200M Phase-Out

For approximately 20 years the SIMATIC ET 200M series was the basis of our turbine control system (S7, PCS7 and T3000) to process data and to control all components of our industrial steam turbines and its ancillaries.

After this long period, these I/O and communication cards are now in phase PM410, meaning they are being phased out. You can still order these cards, and they should remain available as replacement or repair parts for the next few years.

Example of a SIMATIC ET 200M configuration

Summary of Key Dates

Milestone	Description	Effective Date
PM400	Product Phase-Out announcement	October 1, 2023
PM410	Type Discontinuation	October 1, 2025
PM490	Discontinuation	TBD

Timeline for Phase-Out

How to go on?

Siemens Energy as your partner and consultant for your turbine control system wants to help and support you in finding the right solution and strategic approach for the future of your turbine control system.

Therefore we defined the SIMATIC ET 200SP HA as new standard periphery- and communication-system.

Example of a SIMATIC ET 200SP HA configuration

Ready for the future

With the new SIMATIC ET 200SP HA system we also updated our turbine control system to state of the art. We are now using Profinet communication whereever it is technically possible, but we also have Profibus communication as a backup solution in place. Together with you we find the best technical solution. Also systems like SIMATIC ET 200MP or SIMATIC ET 200SP can be used.

Technical necessities

Due to larger dimensions of SIMATIC ET 200SP HA system it will probably become necessary to modify the cabinets or even to entirely replace them. During the offering phase this will be analysed by our technical experts and a suitable technical solution will be provided. Customers are encouraged to contact their Siemens Energy sales representative to receive an offer begin planning the transition and ensure a smooth migration.
