T3000 Upgrade & Spare Parts Management

Obsolescence of Software and Hardware

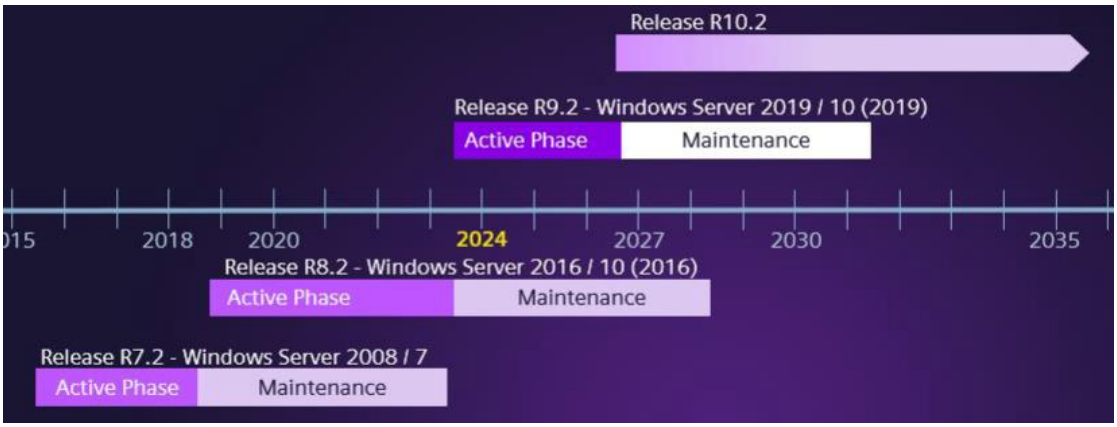

T3000 Version Upgrade

Long-Term Support Release 9.2

To the best of our knowledge, you are operating a turbine with T3000 using one of the older versions listed below. As part of the generally applicable Long-Term Support (LTS), T3000 ensures the provision of updates and patches for 8 years. Beyond that, an upgrade to the current version is recommended.

- LTS R7.2 SP1 reached the end of its lifecycle on July 31, 2023.
- LTS R8.2 SP4 entered the maintenance phase on March 31, 2023, with an expected maintenance duration of 5 years and will be technically supported until March 31, 2028.

Release R9.2 is the latest version with Long-Term Support. It entered the active phase on April 6, 2023, and will be technically supported until 2031.

T3000 IT Spare Parts Management

Product Discontinuation

The lifespan of hardware components is decoupled from Long-Term Support. In 2024, the hardware portfolio for Release 9.2 was restructured.

- New T3000 Client Supermicro SYS-E300
- New T3000 Host/Server HPE ProLiant DL20 Gen11

As a result, many components are transitioning into the maintenance phase and will only be available as spare parts. Therefore, it is important to assess the need for spare parts or consider upgrading the hardware.

Siemens Energy supports you in finding the right solution and strategic approach for the future of your turbine control system. If you are interested in finding and developing a solution with us, please get in touch with your responsible Siemens Energy sales representative.
