# NOTICE TO SUPPLIERS

Subject: Technical Documentation

Originator: Kate Siegel
Job Title: AGT Supplier Quality Head
Product Line: Aero Derivative Gas Turbine (AGT)
Siemens Energy Business Unit: Siemens Energy AGT

NTS Number: SC036
Issue: 001
Date: November 4, 2025

For the attention of the Managing Director

Dear Sir or Madam

Introduction

This Notice to Suppliers (NTS) is issued to ensure suppliers are aware of requirements for technical information such as data cards, condition of supply drawings, etc.

As a reminder, a previous supplier communication dated January 26, 2014 explained that technical authority for a component is to be determined by its usage on either 1) both Aero engines and Industrial engines, or 2) on Industrial engines only. A part which is used on both Aero and Industrial engines is deemed to be Aero common. The table below gives details on how to determine an Aero common or Siemens Energy unique part number.

Scope / Applicability

Applicable to suppliers of Siemens Energy - Aeroderivative Gas Turbines (AGT).

Action Required

When submitting technical information for review by Siemens Energy for a Siemens Energy unique part number, all references to Rolls-Royce must be removed from the document.

As an example, this includes such documents as data cards and condition of supply drawings where the part number is a Siemens Energy unique part number. Reference table below for part number prefixes.
