Energy Management Policy

Siemens Energy d.o.o., Croatia

The purpose of this policy is to define the Siemens Energy approach to managing energy efficiency.

We have committed to become climate neutral in own operations by 2030 and have launched our Climate Neutral Program to achieve this ambitious target.

At Siemens Energy, we're supporting our customers in transitioning to a more sustainable world using our innovative technologies, extensive experience, and an ambitious strategy to drive the decarbonization of global energy systems. We're partnering with our suppliers to decarbonize our supply chain.

Rational consumption of energy resources in the company and in solutions which we provide to our customers is important link in our business operation. We achieve preservation of the environment through clearly defined aspects and influences of company's processes and activities on the energy management by monitoring and control of consumption of resources during the realization of processes in the company and improvement of processes at customers.

We apply modern technologies and processes, knowledge, and experience in order to continuously improve energy management performances.

Our strongest levers to achieve climate neutrality by 2030 are:

Reducing energy consumption
Energy efficiency projects at our locations such as process optimization and building improvements.

New Mobility Concepts
We aim to continuously reduce emissions from our vehicle fleet as well as the associated fuel costs.

Relative Reduction of Emissions from Sold Products
We promote the implementation of innovative solutions for the recovery of industrial waste heat, combined heat and power (CHP) systems, technologies for future DC networks, and the digitalization of energy networks, with the goal of continuously improving energy performance.

Accelerating the Use of Renewable Energy
We accelerate the adoption of renewable energy through the implementation of technologies and solutions in the field of renewable energy, including energy storage systems, electric drives, and the development of electrical infrastructure.

Transparency and Availability of Data
We ensure transparency and availability of data and resources necessary for achieving the established goals in improving energy performance.
We collaborate and share our experience in energy management.
