

Going Digital

Siemens Energy's Electronic Invoicing

Dear valued Supplier,

Digitalization is fundamentally transforming the value chain and offers major opportunities for all parties:

Automated order processing. Speed. End-to-end visibility. Manual errors removed. Quality improved. Efficiency.

Digitalization is not just a project - for us, it has become part of our strategy.

One of the steps on this journey is digitalizing the invoice exchange between Siemens Energy and you, our Suppliers. With this process the E-Invoicing Team supported by Siemens Energy Management is aiming at increasing the number of digital transactions thus eliminating paper and email invoices.

Even if the major part of the effort for the project implementation is on our side, we are aware that this step may also require changes on your end. We ask you to join forces to capture the potentials for both our companies. Let's unlock the value of digitalization in your order-to-cash and our purchase-to-pay process from beginning to end! Implementing this initiative will help both our companies to strengthen our business processes in efficiency and performance.

The future is digital – please join us on this path!

With best regards Christian Holzer

Head of Supply Chain Management, Siemens Energy
