Siemens Turbine from Brno Supplies Steam to Cold Siberia

The leading global paper giant Ilim Group is investing over one billion dollars in the extension and modernization of their paper mill in Ust Ilimsk, Siberia, located in the frosty Irkutsk Oblast of the Russian Federation. This investment will include a Siemens turbine from Brno, supplied including auxiliaries to generate electricity and service steam to the giant paper mill starting in 2021.

Ust Ilimsk is known for its extreme climatic conditions. The average annual temperature is around -3° C, and in winter thermometers can sometimes reveal a nearly incredible -53°C. In summer the local population must in turn cope with temperatures above 40°C. These meteorological extremes obviously affect the new hall construction on the premises of the local paper mill, but they will never have any impact on the operation of the steam turbine set by Siemens. “In the 120 years of our existence we have supplied turbines from Brno to nearly seventy countries around the world, and our machines can be found in all inhabited continents. We are able to design turbines for all operating conditions and Siberia in Russia is no exception,” explained Erik Feith, CEO of Siemens Gas and Power, s.r.o. branch Industrial Turbomachinery.

The Brno plant will supply a turbine set to the plant including a back-pressure turbine type SST-400 with a power of 35 MW. The supply will also include the transport of the turbine, supervision, and the commissioning of the whole set. “We will transport the turbine as an oversized load to the Hamburg harbor, from where it will travel by ferry to St. Petersburg and then on a truck again directly to Ust Ilimsk. The whole device will therefore need special protection against saltwater and insulation against temperature fluctuations,” added Mr. Feith.
Ilim Group annually produces 2 million tons of cellulose, representing three quarters of total Russian production. In addition, the plant has a big share in Russian cardboard (20 percent) and paper (10 percent) production. Its production would easily cover the complete annual consumption of paper and cardboard in the whole Czech Republic. This investment worth 1.2 billion dollars into the Ust Ilimsk plant will nearly double its production capacity.

The Brno-based company Siemens Gas and Power, a branch of Siemens Industrial Turbomachinery, employs about 800 experts in the production and servicing of industrial steam turbines with power up to 150 MW. Thanks to increasing demand for its production, the Brno plant currently has vacancies for nearly thirty new colleagues in manufacturing as well as back office staff, including turbine installation and commissioning, offering a unique opportunity to travel on business all over the world.

The leading global paper giant Ilim Group is investing in the extension and modernization of their paper mill in Ust Ilimsk, Siberia.

Siemens Gas and Power (GP) is a global pacesetter in energy, helping customers to meet the evolving demands of today's industries and societies. GP comprises broad competencies across the entire energy value chain and offers a uniquely comprehensive portfolio for utilities, independent power producers, transmission system operators, the oil and gas industry and other energy intensive industries. Products, solutions, systems and services address the extraction, processing and the transport of oil and gas as well as power and heat generation in central and distributed thermal power plants, power transmission and grid stability, as well as energy transition technologies including storage. With global headquarters in Houston in the U.S. and around 63,000 employees in over 80 countries, Siemens Gas and Power has a presence across the globe and is a leading innovator for the energy systems of today and tomorrow, as it has been for more than 150 years.

Siemens AG (Berlin and Munich) is a global technology powerhouse that has stood for engineering excellence, innovation, quality, reliability and internationality for more than 170 years. The company is active around the globe, focusing on the areas of power generation and distribution, intelligent infrastructure for buildings and distributed energy systems, and automation and digitalization in the process and manufacturing industries. Through the separately managed company Siemens Mobility, a leading supplier of smart mobility solutions for rail and road transport, Siemens is shaping the world market for passenger and freight services. Due to its majority stakes in the publicly listed companies Siemens Healthineers AG and Siemens Gamesa Renewable Energy, Siemens is also a world-leading supplier of medical technology and digital healthcare services as well as environmentally friendly solutions for onshore and offshore wind power generation. In fiscal 2019, which ended on September 30, 2019, Siemens generated revenue of €86.8 billion and net income of €5.6 billion. At the end of September 2019, the company had around 385,000 employees worldwide. Further information is available on the Internet at www.siemens.com.
