## Increased Reliability & Availability

Emission  
Reduction

### Product Overview

The O-Ring valve cover is specifically designed to reduce fugitive emissions and improve reliability.

To bring the entire valve assembly up to state-of-the-art design specifications, new valve covers are supplied with a barrel-type valve cage.

### Improved Features

- Single O-ring seal.
- Field-proven OEM design.
- Eliminates additional gaskets/leak paths.
- To bring the entire valve assembly up to state-of-the-art design specifications, new valve covers are supplied with a barrel-type valve cage.

### Benefits

- Achieves optimum reliability for reduced maintenance and downtime.
- Reduced Emission
- Reliability
- Availability

### Scope of work & Implementation

- Typical manufacturing lead times range for standard parts depending on the factory workload. Service center support for installation and repair of valve covers is available.
