

Siemens Energy BlueDrive Introduction

Place	Online Training
Language	English
Length	1 hour

Course Description

The course introduces BlueDrive marine solutions roadmap and architecture, focusing on the interplay of different system modules to optimize vessel operations.

Objectives

After gaining information on how different system modules are built-up and interact in the vessel-specific solution you are

- able to know the basic operation principles for different systems.
- able to optimize safe and economic operation of the vessel.

Topics

- DEP system architecture
- Basic operation principles for each system separately
- Blackout prevention

Training Methods

- Interactive lectures
- Training videos
- Formal assessment

Entry standards: None

Certificate

A certificate can be downloaded when you have taken the final test and have a score of 80% or higher.

Training Path

This BlueDrive online training is the first step, a basic introduction to our system, and is a precursor to attend onboard and/or classroom training, which are the next steps on our training path.
