

Remote Customer Witness Test

Applicable fleet SGT-400, SGT-300, SGT-200, SGT-100

Reduce Carbon Footprint

Up to 4.795 tons less CO₂ per test*

Product Overview

Siemens Energy understands in the modern world flexibility and sustainability are key drivers for our Customers.

With its Remote Customer Witness Test (RCWT) service offering, Siemens Energy is able to provide the typical benefits that arise from attending a Customer Witness Test in person, without customer's key representatives leaving site and incurring expensive time away and travel costs.

By undertaking a RCWT you can view firsthand the testing of your major rotating equipment (i.e. Gas Generators, Power Turbines) in a more flexible, sustainable and cost effect manner.

Improved Features

- Reduce your impact on the environment
- Offset your carbon footprint
- Reduce your travel costs

Benefits

- Increased participation of the Witness Test at no extra cost
- Reduced time away from site/key operations
- Plan the witness test at a time that suits you
- Participation is possible from all over the globe

Scope of work & Implementation

The key principles behind this service are as follows:

- Review the testing of your engine remotely
- Replicating the standard Customer Witness Test (CWT)
- Enables virtual participation in the major equipment (GG or PT) test activity
- Customer & Siemens Test Engineers can interact via a remote connection

In addition to the above, a hybrid option is available, comprising of some customer representatives attending the test in person, with others accessing via remote connection for a more diverse global participation.

*Based on a case study of 4 attendees from Latin America
