

Quality Policy

Siemens Energy d.o.o., Slovenia

We design, develop, manufacture and market our products, solutions and services to energize society and engage in innovation to address global energy megatrends, digitalization, decarbonization and demand growth.

Throughout all stages we focus on making our customers successful by being the trusted partner and deliver on our promises as outlined in our following Quality Principles.

1. Customer focus in all we do

- We interact with our internal and external customers in a proactive and timely way to understand their requirements and expectations.

2. Personal commitment to quality

- We know and are qualified to meet our quality standards so we can fulfill and even exceed customer expectations in everything we do.
- We empower every employee to raise any issue that does not reflect our quality principles.

3. Pro-active continuous improvement

- We improve through learning by seeking out ideas, understanding others' needs, and communicating openly.
- We actively apply processes for quality-related risk and opportunity management.

4. Management system that supports sustainable business success

- We address business-specific legislation, standards, and regulations, and ensure compliance in all business quality aspects in an efficient way.

We perform regular reviews of our quality performance, objectives, and management system effectiveness. Verification is an important part of our continuous improvement processes, employee competency, successful supplier development, and engagement, as well as compliance with regulations.

We are committed to work in line with our Quality Policy, ensuring that it is widely communicated and reflected within our business-specific management systems.
