

Shareholder Letter

Q1 FY2023

Siemens Energy Investor Relations

Siemens Energy is a trademark licensed by Siemens AG.

Dear shareholders,

On February 7, we published Q1 fiscal year 2023 results and we conducted our 3rd Annual Shareholder's Meeting (AGM).

During the quarter, Siemens Energy delivered strong order and revenue growth and better than expected cash flow. A strongly improved operational performance at Gas Services (GS), Grid Technologies (GT), and Transformation of Industry (TI) was, however, more than offset by charges of €0.5bn at Siemens Gamesa Renewable Energy (SGRE).

"Our order growth demonstrates that we have the right portfolio to capitalize on the energy transition. Notwithstanding the charges at Siemens Gamesa, Jochen Eickholt and his team are making progress in improving the sustainability of the company. The delisting of Siemens Gamesa will further support the team to focus on solving the operational problems and the turnaround", said Christian Bruch.

Orders continued to be very strong with comparable growth of 49.2%. New orders of €12.7bn, supported by large orders especially at GT, pushed the order book to a record value of €98.8bn. **Revenues amounted to €7.1bn and increased by 16.0% on a comparable basis.** All segments contributed to this growth.

Siemens Energy's profit before special items was minus €282m due to charges at SGRE. These charges reflected the outcome of an evaluation of the installed fleet at SGRE, which showed higher than expected failure rates in specific components resulting in higher warranty and service maintenance cost assumptions. **GS and GT reported sharp improvements year-over-year and TI managed the turnaround.** Special items were negative with €103m, mainly driven by restructuring costs at SGRE. As a result, Profit for Siemens Energy was negative €384m. **Accordingly, Siemens Energy reported a Net loss of €598m.** Corresponding basic earnings per share (EPS) were negative €0.60. Free cash flow pre tax was negative at €58m.

We adjusted the outlook for fiscal 2023: Management now expects a Group Profit margin before Special items between 1% and 3% and a Net loss of Siemens Energy Group on prior fiscal year's reported level. Due to the better than expected cash flow during the quarter, management now expects Free cash flow pre tax to be positive.

On the same day we conducted **our Annual Shareholders' Meeting**. We opted again for the virtual format given that new legislature provided us with the opportunity to have a live exchange with you, our shareholders. A large number of you did take the opportunity to participate virtually and 21 shareholders addressed the Managing Board and Supervisory Board with statements and questions. For more information, including the voting results, please see page 3.

At the end of the day **Siemens Gamesa's shares ceased trading on the Spanish stock exchanges**. Nearly 80% of Siemens Gamesa's minority shareholders accepted our offer at €18.05 per share and on January 25 the Extraordinary Shareholders' Meeting of Siemens Gamesa decided to delist Siemens Gamesa from the stock exchanges.

Grid Technologies strongly contributed to our order intake in FY2022 and yet again in Q1. Hence, I take the opportunity to write about **the largest offshore grid connection order Siemens Energy ever received** on the following pages.

Thank you for your interest in Siemens Energy. I wish you good health and all the best.

Michael Hagmann | Head of Investor Relations

Ordentliche Hauptversammlung 2023

The Annual Shareholders' Meeting of Siemens Energy AG was conducted on February 7, 2022. This year, the German legislator created a reliable legal framework which provides an alternative equivalent to a physical shareholders' meeting. The new virtual format addresses important shareholders' rights much more than the limited virtual shareholders' meetings conducted over the past two years on the basis of special pandemic provisions. Our aspiration was to ensure a truly interactive dialog with you similar to what you know from face-to-face events. We were delighted that 2,800 shareholders from all over the world accepted our invitation and participated in the AGM.

To further promote interaction with shareholders, this year we made the speeches by Supervisory Board Chairman Joe Kaeser and Executive Board Chairman Christian Bruch available on the AGM website five days before the meeting. The opportunity to address speeches and questions "live" via video link during the meeting was used extensively. In total, 21 national and international shareholders requested to speak during the AGM.

To keep the flexibility for future shareholders' meetings, we proposed an amendment to the Articles of Association, which allows us to opt for a virtual shareholders' meeting. According to our proposal, the legally permitted authorization period of five years was not exploited in full but restricted to two years instead. Thus, we will learn from the experiences made and review our proposals for the future. This proposal was approved by 91.68% of the shareholders. 65.04% of the capital stock was represented at the AGM and voted in favor of all agenda items with a high level of approval (see table below). The AGM was officially closed by Joe Kaeser at 18:08.

The next Annual General Meeting is scheduled for February 2024.

Voting results of AGM agenda items

TOP 1	Annual Financial Statements (IFRS and HGB), Combined Management Report for Fiscal 2022	no resolution
TOP 2	Appropriation of net income	99.86 %

Extraordinary General Meeting of Siemens Gamesa approves delisting

On January 25, 2023, the shareholders of Siemens Gamesa Renewable Energy, S.A. (SGRE) approved the delisting of the company from the Spanish Stock Exchanges at an Extraordinary General Meeting. 98.43% of shareholders voted in favor of the motion to delist the company. The Spanish Securities and Exchange Commission CNMV approved the delisting on February 3. The official delisting took place on 14 February 2023.

Christian Bruch, CEO of Siemens Energy and non-executive Chairman of the Board of Directors of SGRE, said: *"Resolving the current challenges at Siemens Gamesa and turning around the business is the number one priority. Jochen Eickholt and his team have started to implement extensive changes and we have seen initial positive impact. The delisting will help the team focus entirely on solving operational issues. This is the right thing to do to get Siemens Gamesa back on track and I appreciate the decision of the outstanding shareholders to support our efforts to return to profitability."*

The delisting follows a voluntary cash tender offer by Siemens Energy: SGRE's minority shareholders were offered € 18.05 per share in cash. The acceptance period for the offer ran from 8th November 2022 until 13th December 2022. At the end of the acceptance period, Siemens Energy's total shareholding in SGRE stood at 92.72%. The SGRE shareholders were still able to sell their shares under a sustained purchase order, which was in force until February 7, 2023, when SGRE's shares ceased trading. On February 7 Siemens Energy held 97.79% of SGRE shares.

Siemens Energy is currently reviewing options for SGRE shareholders who missed the opportunity to sell their shares. These shareholders can contact us at investorrelations@siemens-energy.com.

Major order for Siemens Energy enables transmission of wind power for 4 million people

In future, a single grid connection will transport up to two gigawatts (GW) of offshore wind power to the onshore power grid. This is made possible by converter systems provided by Siemens Energy and Spanish company Dragados Offshore. The German transmission system operator Amprion has awarded the world's first order for two of these systems to the consortium. In total, up to four gigawatts of green electricity from several offshore wind farms in the German North Sea can be transported to shore – enough electricity to meet the needs of about four million people. The contract for the consortium is worth a total of more than €4 billion including maintenance for ten years. For Siemens Energy it is the largest offshore grid connection order the company has received to date.

Siemens Energy's scope of supply consists of two converter platforms at sea and two associated stations on land. The wind turbines generate alternating current and feed it into the converter platforms, which convert the alternating current into a direct current. Only in this way can large amounts of energy travel the long distance of around 390 kilometers (242 miles) each to the two converter stations on land via a direct current cable. The converter stations on land are being built near Wehrendorf in Lower Saxony and Westerkappeln in northern North Rhine-Westphalia.

Siemens Energy will manufacture all major high-voltage equipment for the two connection systems, such as converter technology, transformers, and switchgear, in Germany and will assume the systems' complete maintenance for a period of 10 years. This includes services to ensure cyber security and transport logistics, such as the provision of service ships and helicopters.

Outlook for the fiscal year 2023

Assumptions for the segments GS, GT and TI in respect to revenue growth and Profit margins before Special items remain unchanged and we continue to expect for Siemens Energy **comparable revenue growth** (excluding currency translation and portfolio effects) **in fiscal year 2023 in a range of 3% to 7%** (unchanged).

Due to the aforementioned charges on the result, **SGRE's management no longer expects SGRE's profitability to be in line with its business plan for fiscal year 2023**. Accordingly, we had **to adjust our outlook for Siemens Energy for fiscal year 2023**.

We now expect Siemens Energy **Group's Profit margin before Special items between 1% and 3%** (previously in a range of 2% to 4%) and, accordingly, **Net loss of Siemens Energy Group to be on prior fiscal year's reported level** (previously a sharp reduction of Net loss compared to fiscal year 2022).

Due to the **better than expected cash flow development during the quarter, we now expect Free cash flow pre tax for fiscal year 2023 to be positive** (previously in a negative range of low- to mid-triple-digit million).

The outlook for Siemens Energy assumes no major negative financial impacts from COVID-19 or other pandemic related events, no further deterioration in the supply chain and raw material cost environment, and excludes charges related to legal and regulatory matters.

Information and Forward-Looking Statements

This document contains statements related to our future business and financial performance, and future events or developments involving Siemens Energy that may constitute forward-looking statements. These statements may be identified by words such as "expect," "look forward to," "anticipate" "intend," "plan," "believe," "seek," "estimate," "will," "project," or words of similar meaning. We may also make forward-looking statements in other reports, prospectuses, in presentations, in material delivered to shareholders, and in press releases. In addition, our representatives may from time to time make oral forward-looking statements. Such statements are based on the current expectations and certain assumptions of Siemens Energy's management, of which many are beyond Siemens Energy's control. These are subject to a number of risks, uncertainties, and other factors, including, but not limited to, those described in disclosures, in particular in the chapter "Report on expected developments and associated material opportunities and risks" in the Annual Report. Should one or more of these risks or uncertainties materialize, should acts of force majeure, such as pandemics, occur, or should underlying expectations including future events occur at a later date or not at all, or should

assumptions prove incorrect, Siemens Energy's actual results, performance, or achievements may (negatively or positively) vary materially from those described explicitly or implicitly in the relevant forward-looking statement. Siemens Energy neither intends, nor assumes any obligation, to update or revise these forward-looking statements in light of developments which differ from those anticipated. This document includes supplemental financial measures – that are not clearly defined in the applicable financial reporting framework – and that are or may be alternative performance measures (non-GAAP-measures). These supplemental financial measures should not be viewed in isolation or as alternatives to measures of Siemens Energy's net assets and financial position or results of operations as presented in accordance with the applicable financial reporting framework in its consolidated financial statements. Other companies that report or describe similarly titled alternative performance measures may calculate them differently. Due to rounding, numbers presented throughout this and other documents may not add up precisely to the totals provided and percentages may not precisely reflect the absolute figures."
